

## AMEYA and MANALI

### CS 2055 - PROJECT

#### ➤ ADDRESSED FEEDBACKS:

##### - **MILESTONE 1:**

1. Please do not add additional information to Reservation.

➔ This wasn't an issue as Professor had emailed about adding the new columns in reservation table. Thus, this is fixed

##### - **MILESTONE 2:**

1. "Show customer info, given customer name task" is incomplete. You should retrieve corresponding information from the database and display it on the screen according to the description.

-> Addressed this, as previously the display didn't show the records and had null pointer exceptions, now it is fixed.

2. For task Task #6 and Task #7, you should consider the case that there may be the available plane for a flight (that reaches its max capacity) to upgrade. In that case, flights that are not currently having the largest plane should all be considered as having available seats.

-> We worked on this issue and now flights that are not currently having the largest plane are considered to have available seats.
